The Art of Communication

Prehistoric drawings represent one of the earliest known forms of non-verbal communication.

These drawings, or pictograms, allowed early man to record and communicate information over time.

Like all good communications systems, these ancient pictograms have survived the test of time and still deliver information today. In fact,

the value of this communication system has actually increased with age; still delivering the original message, in a form that we now view and value as art.

Your Belden IBDN Certified System may never evolve into an art form, but Certification is your assurance that your Belden IBDN System will continue to deliver your information throughout its entire lifetime.
